Medicine and allied sciences flourished in the medieval Islamic world. *1001 Cures: Contributions in Medicine and Healthcare from Muslim Civilisation* tells the fascinating story of how generations of physicians from different countries and creeds created a medical tradition admired by friend and foe. It influences the fates and fortunes of countless human beings, both East and West.

Based on a translation movement of Greek medical tests, it drew on the legacy of surrounding cultures (Egyptian, Persian, Indian and Chinese). Importantly, it innovated in surgery, gynaecology, paediatrics and pharmacology, to name just a few areas. Ultimately, this tradition served as the foundation for European university medicine in the medieval and early modern period and has thus impacted healthcare until today.

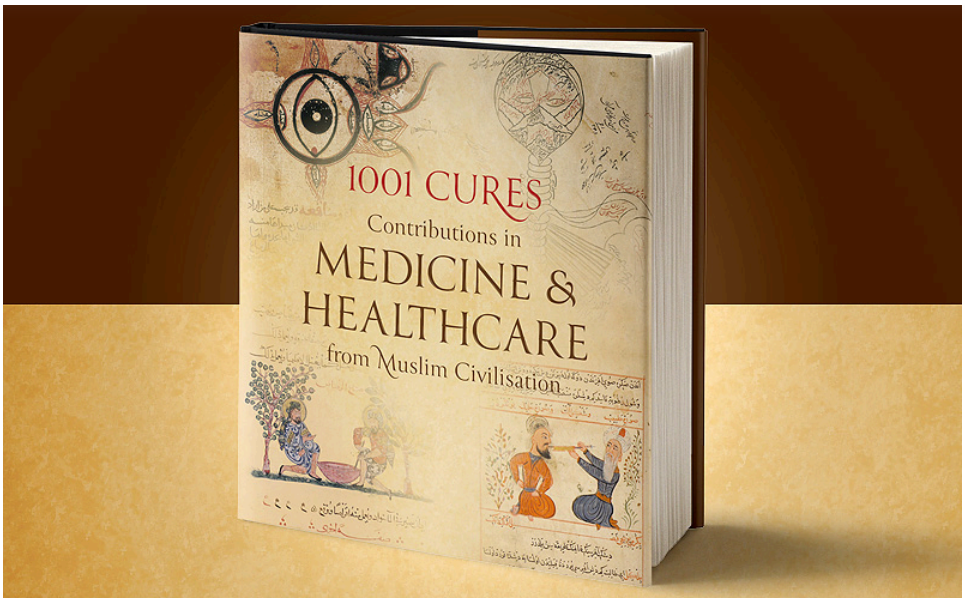

> *The choice of the title 1001 cures like its predecessor publication 1001 Inventions, reminds us of the famous 1001 Nights or the Arabian Nights. These were allegedly stories to entertain the caliph of Baghdad Harun al–Rasheed who, like his son Al–Mamoon, was a patron of the arts and mathematics. During their period the movement of translation of philosophical, cultural and medical heritage of the antiquities to Arabic contributed to the start of new Renaissance of intellectual activities in the Middle East, North Africa and Central Asia in the high middle age. This is demonstrated in this superb volume. It is a substantial contribution to this important point of the history of Medicine and Healthcare. It comes at a time when the world desperately needs intercultural understanding and appreciation. It is an unalloyed pleasure to commend it to you."* **Professor Sir Magdi Yacoub**
